

Wirsbo Offers You More Choices

Wirsbo PEX

Wirsbo Radiant Floors is a unique heating system that uses warm water circulated in durable PEX tubing under the floor.

Tested and proven for over 30 years, PEX is both durable and flexible allowing for fast and easy installation. Used in residential and commercial buildings, billions of feet of Wirsbo PEX tubing is currently installed around the world.

Wirsbo Quik Trak™ System

Cold basements? Cold floors? Drafty rooms? The Wirsbo Quik Trak system brings affordable radiant heating solutions to troublesome cold spots in existing homes, thanks to a thin 1/2" profile that simplifies basement and above subfloor retrofits. Easy to plan and install, Quik Trak eliminates moisture and excess weight issues, and other concerns often associated with poured floors.

Radiant Ready™ Option

Radiant Ready is the smartest installation that a homeowner or builder could consider. Radiant Ready means you install Wirsbo PEX tubing in the concrete slab areas during the initial construction phase – get the tubing in the floor before the pour! This way, the floor is ready for radiant comfort now or in the future, whenever the homeowner decides to complete the system. It's an easy installation and offers homeowners and builders an inexpensive way to increase the value of the home or building.

Provides a Comfortable, Even Heat

"What I like about Radiant Floor Heating is the nice even heat over the whole room. You can zone it and regulate the temperature on a room by room basis. And there's nothing better than stepping onto a warm floor when you get out of bed on a cold winter morning."

Dean Johnson

*Co-host and Executive Producer
Public Television's Hometown*

Do it for Yourself, Be Warm

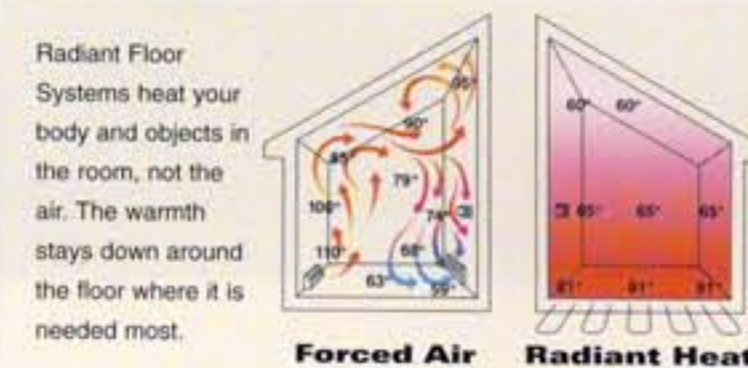

"I have long been an advocate of Radiant Floor Heat. It gives people the type of heat they want: Comfortable heat they can't see or hear, like a warm blanket under the floor heating the people and objects in the room. Do it for you, be warm!"

Rich Trethewey

Host: This Old House

Think Comfort

If you're building or remodeling, you have a lot of decisions to make and many choices to consider. One

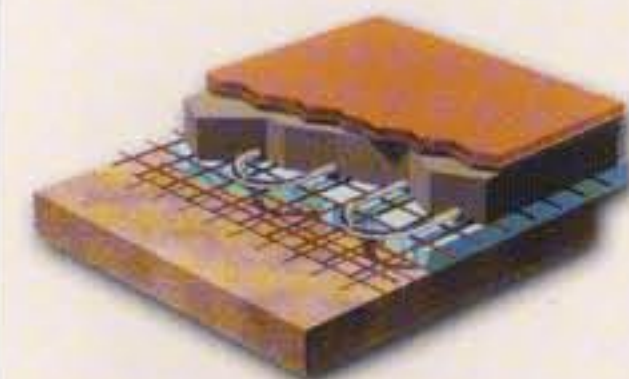

of your most important decisions is your home's heating system. Radiant Floor Heating is a unique and cost effective alternative to forced air heating systems, which on air circulation to distribute heat. With forced air systems, the hot air rises and accumulates near the ceiling.

Radiant floor heat is transferred from the floor, directly warming people and furnishings. Heat stays near the floor where you and your family can most benefit from it.

- The comfort of warm feet even on the coldest mornings. Step out of bed, or out of the shower onto radiant warmth.
- Reduced heating bills by 20 to 40 percent and significantly increase the resale value of your home.
- It works with any type of floor covering including carpet, hardwood, tile and linolium.
- An end to cold, drafty rooms. Ideal for today's homes with vaulted ceilings and expansive windows.
- Perfect for people with asthma or respiratory problems, a Wirsbo Radiant Floors System does not disperse allergens and other pollutants into the air. Dust levels are significantly reduced.
- The ability to use multiple thermostats allows you to control your comfort and your costs by turning down the temperature in rooms that are not in use.

Wirsbo Radiant Offers:

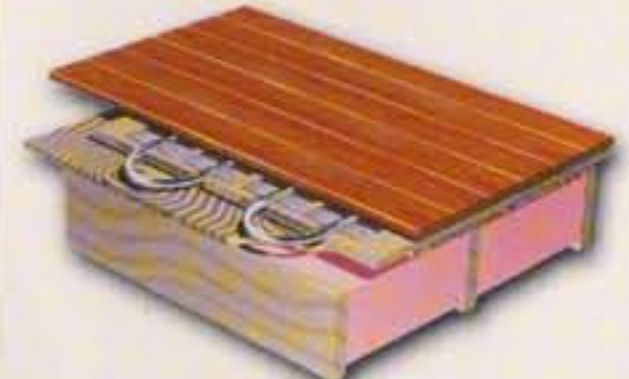

Wirsbo Radiant Floors can be installed:

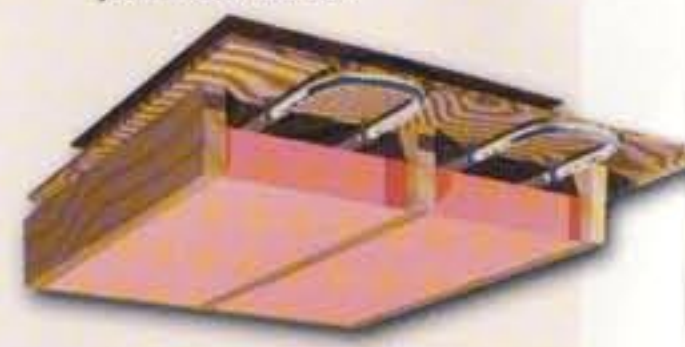

Over suspended wood floors and covered with poured floor underlayment.

Between joists for remodels and additions, and for heating the upper floors of your new home.

An alternative to lightweight concrete. The tubing is placed over the sub-floor.

Wirsbo Quik Trak is placed over the subfloor of suspended or concrete floors. An excellent choice for remodeling and additions.

Comfortable, even heat. Perfect for homes with vaulted ceilings; takes the chill out of cold kitchen, bathroom and basement floors.

Easy and affordable. Ideal for new construction, remodels and retrofits; can be installed quickly and easily.

Practical. Keeps heat at floor level where it's needed most.

Clean, healthy. Does not contribute to dust and pollutants.

Versatile. Works with any kind of floor covering. Ideal for installations in concrete slabs, lower levels, basements and garages.

Quiet. Extremely quiet, when compared to forced air systems.

Economical. Can reduce heating bills up to 40 percent.

Durable, reliable. With millions of installations worldwide, Wirsbo Systems are proven and reliable.

Effective. The only effective way to warm tile or marble floors in kitchens and bathrooms.

Great outdoors! Wirsbo Radiant Heat technology is also used for melting snow and ice from sidewalks, driveways and even outdoor athletic fields.

Maintenance free. Eliminates the need for annual furnace and duct cleaning.

Peace of Mind. Carries a 25-year limited warranty when installed by a Wirsbo Authorized Dealer
